BUDDY AI / WHITEPAPER

BUDDY Token Information

Item	Information
Token Name	BUDDY
Token Symbol	BUDDY
Blockchain	Solana
Token Status	Existing ecosystem token
Token Mint Address	`4P8ZC4cGTBPz4TPsFHtuoyLT8ftDcf8J9pzmJrUMoNb8`
New BUDDY Token	No replacement issuance planned

BUDDY AI intends to build its ecosystem around the existing BUDDY token on Solana.

BUDDY MINT ADDRESS

4P8ZC4cGTBPz4TPsFHtuoyLT8ftDcf8J9pzmJrUMoNb8

Vision, Product Architecture & Ecosystem Economics

November 2026. Built on Solana.

READING THE ECONOMIC MODEL

Paid viewing, Meme creator fees and platform net revenue are separate economic flows. Their allocation percentages apply to different calculation bases.

BUDDY AI / CHAPTER 01

01

Executive Summary

Where Stories Become Communities

Every great story begins with an idea. Every memorable character can inspire a community.

Artificial intelligence is transforming digital entertainment by making storytelling, character design, video production, and publishing increasingly accessible to independent creators.

Meanwhile, blockchain technology has made it possible for communities to create independent digital tokens around shared interests, fictional characters, and cultural moments.

Yet the connection between entertainment and community-driven token creation remains fragmented.

Creators publish stories on content platforms. Audiences discover characters through entertainment and social media. Meme tokens emerge on independent launchpads, often without a clear, traceable relationship to the original creative work.

BUDDY AI aims to connect these experiences within one creator-centered entertainment ecosystem.

Built on Solana, BUDDY AI is designed as an AI-powered short-drama platform where creators can develop stories, produce episodes, register characters, publish content, and earn revenue.

Viewers can watch a drama, explore its registered characters, and discover independently launched Meme tokens associated with those characters or with the drama itself.

Community users can also create new Memes through multiple launching pathways, including a simplified launch directly from a character profile.

A single character may inspire multiple independent tokens, even when those tokens share identical names and symbols.

Each token maintains its own Solana mint address, trading market, liquidity, and community.

Through a proposed creator-fee sharing framework, eligible Meme activity may create additional revenue opportunities for both original content creators and token launchers.

The BUDDY AI ecosystem is built on three principles:

Story First. Original entertainment is the foundation of the platform.

One Character, Many Memes. A character can inspire unlimited independent community creativity.

Creator Value. Content creators should have opportunities to earn from their stories and eligible community activity.

Our vision is to build a platform where stories create characters, characters inspire communities, and communities can support creators.

BUDDY AI / CHAPTER 02

02

Our Origins - From BUDDY to BUDDY AI

Inspired by a Character

The BUDDY token takes its name from the central character of the 2026 horror film *Buddy*.

The film's memorable character inspired the formation of the BUDDY community.

What began as a movie-inspired crypto community has developed into a broader vision for AI-powered entertainment and creator participation.

We believe that original characters can inspire more than momentary attention. They can bring people together, encourage creative expression, and become the starting point for new communities.

BUDDY AI seeks to extend that inspiration to new stories created by independent filmmakers and digital creators.

As a tribute to the creative minds behind the character that inspired our community, BUDDY AI intends to reserve **10% of its net distributable platform revenue for the original creative team behind the 2026 film Buddy.**

This allocation reflects our appreciation for the creators whose work inspired BUDDY.

A Character Inspired Our Community. We Want to Give Back to Its Creators.

> THE ORIGINAL BUDDY CREATORS RESERVE
>
> 10% of net distributable platform revenue is reserved for the original creative team behind the 2026 film Buddy.

BUDDY AI / CHAPTER 03

03

The Problem & Opportunity

Connecting Stories, Characters, and Community Memes

AI-powered creative tools and permissionless token launchpads have reduced the barriers to digital creation.

However, several challenges remain.

3.1 Fragmented Production Workflows

Creators often need multiple separate tools for scripts, characters, images, videos, voices, editing, subtitles, and distribution.

This increases production complexity and makes consistent storytelling harder.

3.2 Limited Direct Content Monetization

Independent creators may attract viewers without having simple ways to sell episodes, offer premium content, or manage revenue.

3.3 The Same-Name Meme Phenomenon

On Solana, multiple independent tokens can use the same name, symbol, or similar artwork.

For example, several community users may independently launch tokens called $WUKONG.

Their names may be identical, but their mint addresses, markets, trading volumes, holders, and communities are different.

A token name does not identify which story or character inspired it.

3.4 Disconnected Discovery

When audiences enjoy a character in a drama, they may want to explore community Memes inspired by that character.

Traditional token-discovery experiences often begin with the asset itself rather than the original story.

Users must search for similarly named tokens without a dedicated character reference.

3.5 Creator Revenue Disconnection

Community token activity may emerge around fictional characters while the original content creators remain disconnected from the resulting creator-fee opportunities.

BUDDY AI approaches this differently.

We do not aim to eliminate same-name Memes. We aim to connect eligible community Memes with identifiable stories, creator-registered characters, and transparent creator-revenue rules.

The solution is not one character, one token.

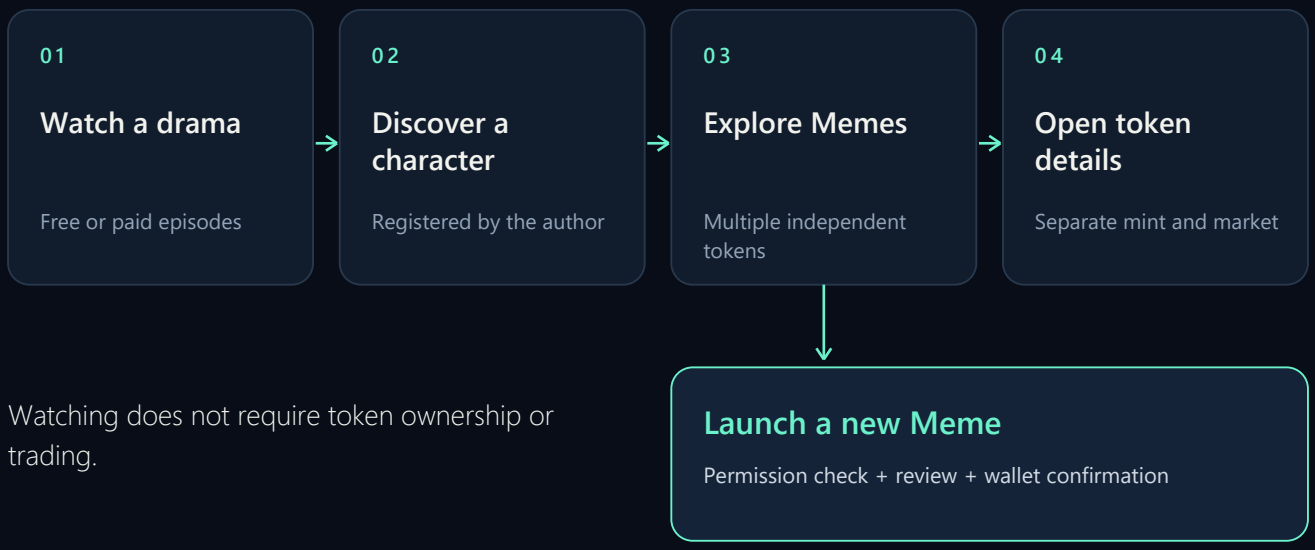

The solution is one identifiable character, many independent Memes, and a clear relationship to the creator behind the story.

BUDDY AI / CHAPTER 04

04

The BUDDY AI Experience

THE CONTENT-FIRST JOURNEY

Watching does not require token ownership or trading.

FIGURE 01 / Product experience. Character and token association settings govern the optional launch path.

Watch the Story. Discover the Character. Explore the Memes.

BUDDY AI introduces a content-first approach to discovering community Memes.

4.1 Discover and Watch a Drama

A drama page will provide:

- Drama title, cover, and description
- Genre and story background
- Free or paid access
- Story-associated community Memes
- Creator information
- Episodes and viewing options
- Characters created by the drama author

Watching the drama is the primary experience.

Users do not need to own or trade tokens to enjoy the content.

4.2 Select a Character

Below the drama, viewers can explore the characters registered by its creator.

Selecting a character opens a dedicated profile containing:

- Character name and visual identity
- Parent drama
- Unique Character ID
- Available token and creator information
- Character story and description
- Registered creator
- Community Meme listings

4.3 Discover Multiple Associated Memes

A character profile displays eligible Meme tokens associated with that specific registered character.

Users can compare tokens by:

- Name and ticker
- Current price and price change
- Trading volume, including 24-hour volume
- Holder count, where available
- Bonding-curve or graduation status
- Applicable creator-fee information
- Full Solana mint address
- Market capitalization
- Liquidity
- Launch date
- Token launcher

Token listings may be sorted by trading volume, market capitalization, liquidity, creation time, and other supported criteria.

4.4 Explore Individual Tokens

Each token opens its own detail page.

Even when multiple tokens share the same name, they remain separate assets with separate mint addresses and trading markets.

The interface may provide price charts, historical activity, market data, on-chain references, and supported trading access.

4.5 Launch a New Meme

If the registered character is open for community association, an eligible user can select **Launch Meme** directly from the character page.

The platform automatically prepares the relevant drama and character information for review before wallet confirmation.

This creates the signature BUDDY AI experience:

Drama → Character → Meme Discovery → Token Details or New Launch

The story provides the creative origin. The character provides the identity. The Memes represent independent community participation.

BUDDY AI / CHAPTER 05

05

AI Drama Studio

Turning Imagination into Entertainment

BUDDY AI aims to provide integrated AI-assisted workflows for creating and publishing short dramas.

Creators can begin with an original idea and develop it into episodic entertainment.

5.1 Story Development

Planned capabilities include:

- AI-assisted scriptwriting
- Episode planning
- Scene descriptions
- Story outlines
- Dialogue development
- Story revisions

5.2 Character Development

Creators can define and manage the characters appearing in their stories.

Planned tools include:

- Character profiles
- Character relationships
- Character management across episodes
- Visual references
- Consistent character styling
- Registration within the Story & Character Registry

5.3 AI Production

BUDDY AI intends to integrate tools for:

- Storyboards
- Voice and dialogue
- Subtitles
- Editing and publishing
- AI image and video generation
- Sound and audio workflows
- Multilingual localization

The platform may initially use established third-party AI services.

5.4 Publishing & Creator Management

Creators will be able to organize dramas into episodes and series, manage content access, review audience information, and control the Meme-association settings of their stories and characters.

5.5 Independent Creative Value

Creators can publish free or paid content without issuing a token.

Meme launching is an optional extension of the entertainment experience, not a prerequisite for creating or monetizing stories.

A Great Story Has Value Beyond Its Tokens.

BUDDY AI / CHAPTER 06 06

Story & Character Registry

The Creator Establishes the Character

The Story & Character Registry is the foundation of BUDDY AI's association and creator-revenue system.

Only characters created and registered by the creator of their parent drama can become eligible for formal Character-Linked Meme launches.

6.1 Drama Registration

A drama creator registers a work under their creator account.

Each accepted drama receives a unique Drama ID.

Its record may include:

- Drama title and description
- Episode references
- Story-level association permissions
- Associated Meme tokens
- Creator account and revenue beneficiary
- Artwork and metadata
- Registered characters

Registration must be authenticated through the platform's designated creator-account or wallet-verification process.

6.2 Character Creation by the Drama Author

The registered drama creator may create character records belonging to that drama.

Each character receives a unique Character ID connected to its parent Drama ID.

Its record may include:

- Character name and artwork
- Parent Drama ID
- Creator-revenue beneficiary
- Associated Solana mint addresses
- Character description
- Registered drama creator
- Association permissions

Community users cannot invent or independently register a character under another creator's drama.

6.3 No Registered Character, No Character Association

If the drama creator has not created a particular character record, that character cannot be selected for a formal Character-Linked Meme launch.

Users may still launch an independent Meme through the standard Launchpad.

They may also associate a token with the overall drama if the drama itself is registered and the creator permits story-level associations.

However, they cannot claim a formal BUDDY AI character association that does not exist in the registry.

6.4 Creator-Controlled Permissions

Drama creators determine whether their dramas and registered characters are available for community Meme association.

The proposed modes are:

Open Association - Eligible users may associate new Meme launches without individual manual approval.

Approval Required - The creator must approve the requested association before the linked launch is finalized.

Association Disabled - New formal associations are not permitted.

These settings control recognized BUDDY AI associations, not independent token creation across Solana.

6.5 Three Meme Categories

Independent Meme

A token with no registered drama or character association.

Story-Linked Meme

A token associated with a registered drama but not a particular character.

Character-Linked Meme

A token associated with a specific character previously created by the registered drama creator.

Story-Linked Memes may appear on the relevant drama page.

Character-Linked Memes may appear on both the drama page and character profile.

Independent Memes remain discoverable through the general Launchpad.

6.6 One Primary Revenue Association

For the initial implementation, each associated token has one primary story or character relationship for creator-fee allocation.

A Character-Linked Meme inherits its parent drama context and does not generate an additional duplicate story-level fee obligation.

A token's name, symbol, or image alone cannot establish this relationship.

6.7 Revenue Beneficiary Integrity

The original creator's designated beneficiary must be recorded and validated before a linked launch's revenue configuration is finalized.

Token launchers cannot unilaterally replace the original creator's recorded entitlement.

Changes to future association permissions do not automatically alter existing token associations or previously established fee entitlements.

6.8 Many Memes per Character

A registered character may be associated with multiple independently launched Memes.

For example, three users may create three distinct $WUKONG tokens linked to the same creator-registered Wukong character.

The tokens can have the same name while maintaining separate mint addresses, liquidity, markets, and communities.

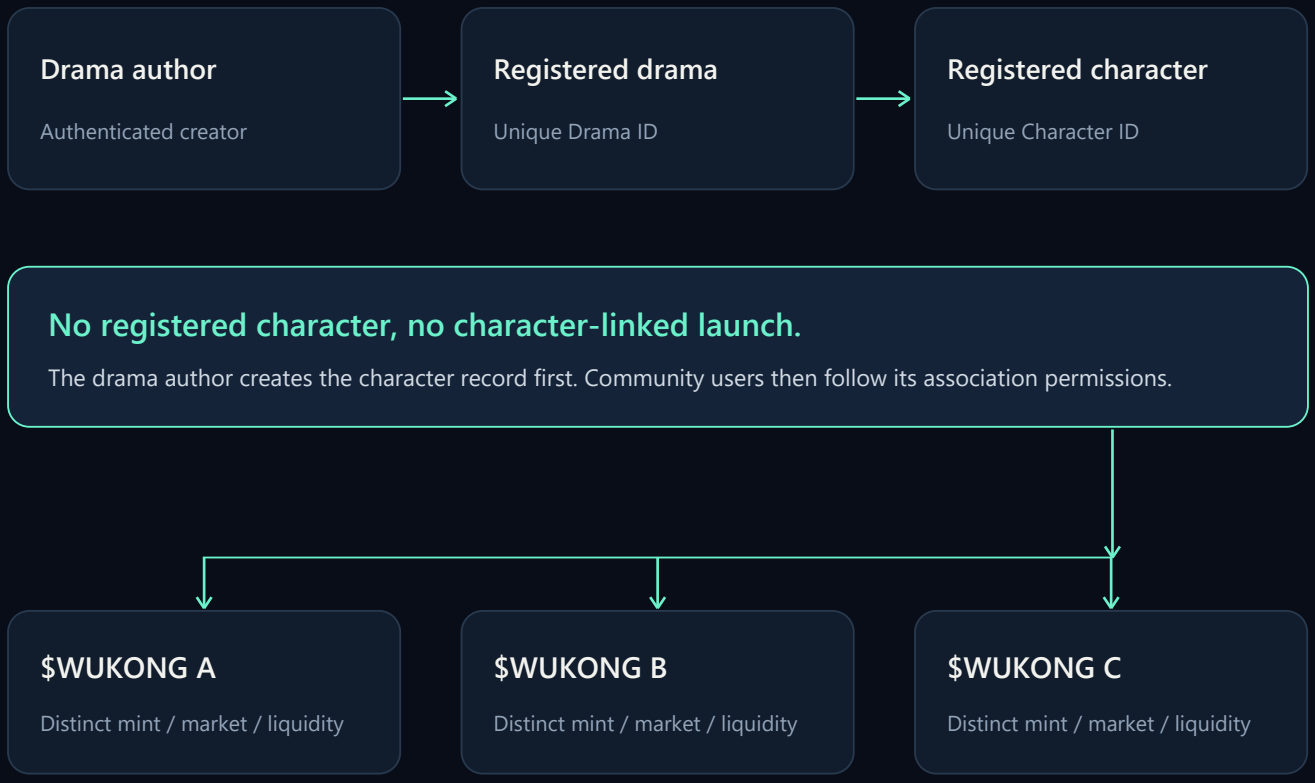

All three eligible associated tokens may be discovered from that Wukong character's page.

Creators Establish Characters. Communities Launch Memes. BUDDY AI Connects Them.

BUDDY AI / WHITEPAPER

The creator establishes identity

IDENTITY BEFORE ASSOCIATION

ONE CHARACTER / MANY INDEPENDENT MEMES

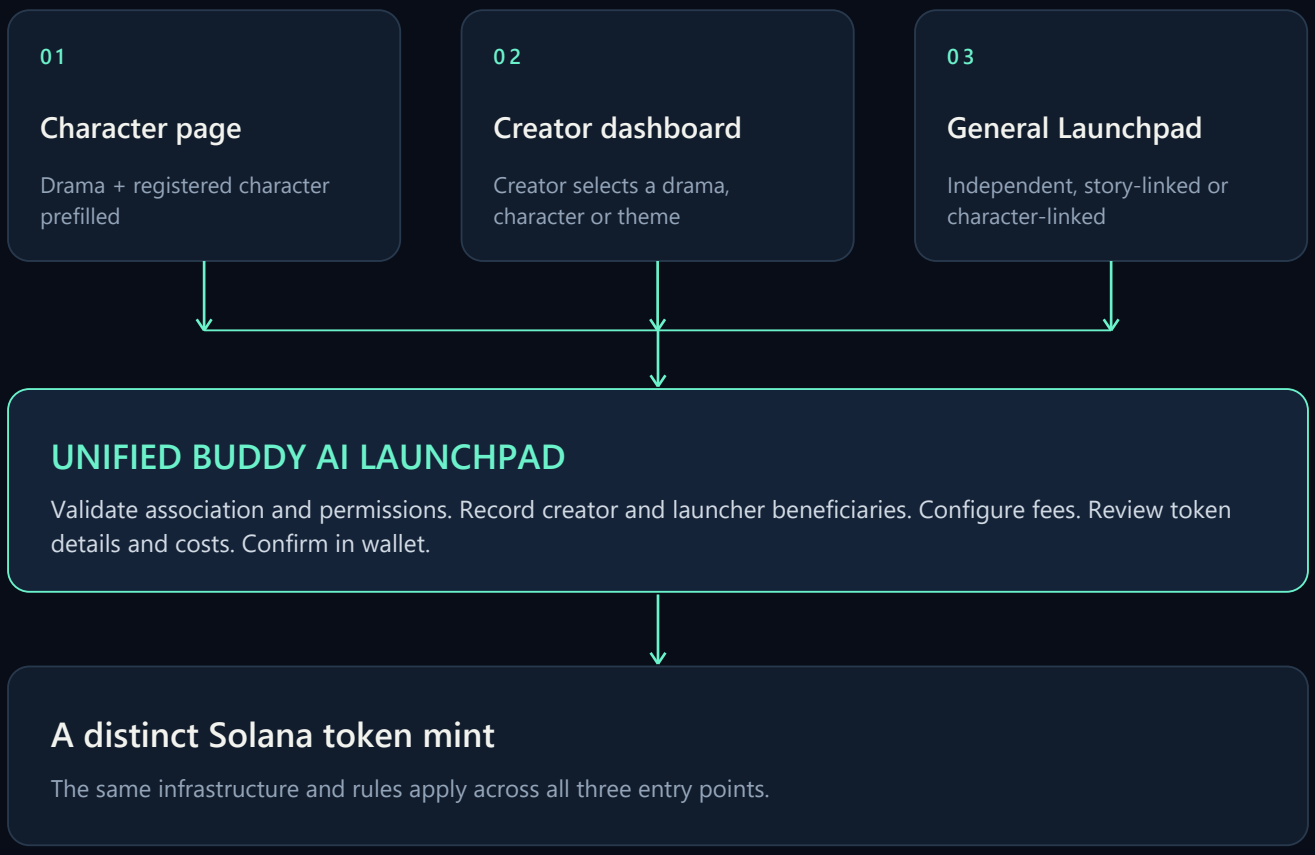

FIGURE 02 / Each linked token records one primary revenue association and the original creator beneficiary. Same names do not merge assets.

BUDDY AI / CHAPTER 07

07

Unified Multi-Entry Meme Launchpad

THREE ENTRY POINTS / ONE LAUNCH SYSTEM

0 SOL additional BUDDY token-creation fee

Network fees, account deposits and underlying protocol charges still apply. One-click preparation still requires wallet authorization.

FIGURE 03 / The entry point changes context; it does not create a separate Launchpad.

Unified launch rules

One Launchpad. Three Ways to Launch.

BUDDY AI will use one underlying Launchpad system for all token-creation pathways.

The entry points differ in the information they provide, but the launch infrastructure, validation rules, fee configuration, and transaction process remain unified.

7.1 Path One - One-Click Character Launch

A user opens a drama, selects an eligible registered character, and chooses **Launch Meme**.

The system prepares:

- Drama ID
- Character ID
- Character reference
- Association permissions
- Original creator-revenue beneficiary
- Proposed creator-fee configuration

The user completes their token details and reviews costs before wallet confirmation.

The term *one-click* refers to simplified preparation. Blockchain transactions and wallet authorization are still required.

7.2 Path Two - Creator-Initiated Launch

A drama creator may launch a Meme from their creator dashboard.

They may associate it with their own drama, a registered character, or an independent theme.

When the drama creator is also the token launcher, the corresponding eligible creator-fee roles may be combined for the same beneficiary.

7.3 Path Three - Standard Permissionless Launch

Any eligible user may create a Meme through the general BUDDY AI Launchpad.

They may choose:

- No association
- An eligible registered drama
- An eligible character within a registered drama

Story-level association is possible without selecting a character.

Character-level association is only possible when the drama creator has created the relevant character record and its permissions allow the launch.

7.4 Association Validation Before Mint Creation

The unified Launchpad validates the requested association before finalizing token creation.

For linked launches, the system checks:

1. Whether the target drama exists.
2. Whether the target character exists, if applicable.
3. Whether the character belongs to the selected drama.
4. Whether the registered creator has enabled or approved the association.
5. Whether the original creator beneficiary is correctly configured.
6. Whether the token-launcher beneficiary and fee rules are recorded.

Successful launches establish a traceable relationship between the token mint address and its registered story or character.

An association must not exist only as a visual label if the advertised creator-fee distribution has not been configured.

7.5 Pump-Inspired Experience, Raydium Infrastructure

BUDDY AI intends to offer a simplified, Pump.fun-inspired user experience.

The preferred initial infrastructure is Raydium LaunchLab, enabling bonding-curve token launches and graduation to Raydium CPMM liquidity pools.

This is a Pump-inspired experience, not a direct use of the Pump.fun launch program.

7.6 Zero Additional BUDDY Creation Fee

BUDDY AI intends to charge **0 SOL in additional platform token-creation fees**.

Users remain responsible for applicable network transaction costs, account deposits, and underlying protocol charges.

Relevant costs will be disclosed before signing.

7.7 Trading and Graduation

BUDDY AI does not propose charging an additional recurring proprietary platform trading fee in its initial model.

Underlying protocol and configured creator fees may still apply.

The initial business model does not assume a separate proprietary BUDDY graduation fee.

Tokens that satisfy the configured graduation conditions are intended to migrate to Raydium CPMM under the selected protocol's rules.

7.8 Independent Token Markets

Every token has its own mint address, supply, holders, liquidity, and trading market.

Multiple Memes associated with the same character do not automatically share prices, assets, or economic entitlements beyond their separately recorded creator-fee arrangements.

BUDDY AI / CHAPTER 08 08

Creator-Fee Economy

Rewarding Original Creators and Meme Launchers

BUDDY AI proposes a creator-fee mechanism for eligible Story-Linked and Character-Linked Memes.

It recognizes two roles.

Original Drama Creator - The creator or designated beneficiaries of the associated drama.

Token Launcher - The user who independently creates the Meme.

8.1 Creator-Fee Rate

For qualifying bonding-curve transactions, the initial target creator-fee component is **0.30% of eligible trading volume**, subject to technical and protocol configuration.

This fee component is separate from underlying protocol trading fees.

Actual distributable creator-fee receipts may differ from the nominal charged amount due to applicable protocol-level deductions.

8.2 Revenue Split

Eligible creator fees actually collected and available for distribution are intended to be allocated as follows:

- **70% - Original Drama Creator**
- **30% - Token Launcher**

The percentages apply only to the eligible distributable creator-fee component.

They do not apply to total trading volume, token market capitalization, or all trading fees.

8.3 Example

For illustrative purposes, assume a Character-Linked Meme generates 1,000 SOL of qualifying bonding-curve trading volume.

At a 0.30% creator-fee rate, the nominal creator-fee component would be 3 SOL.

If the full 3 SOL were eligible for distribution after applicable deductions:

- The original drama creator would receive 2.1 SOL.
- The token launcher would receive 0.9 SOL.

This example is not a guarantee of future revenue.

8.4 Multiple Tokens for One Character

Every associated token has its own trading activity and creator-fee accounting.

An original drama creator may be eligible to receive their recorded share from multiple independent Memes associated with the same registered character.

Each token launcher receives the launcher share attributable to their own token.

8.5 Creator-Launched Memes

If the original drama creator launches a Meme associated with their own work, they may occupy both roles.

Where the same beneficiary is entitled to both allocations, they may receive 100% of the eligible distributable creator-fee component.

For works with multiple contributors, the original creator portion may be allocated according to recorded beneficiary settings.

8.6 Independent Memes

Independent Memes have no associated drama-creator beneficiary.

Where supported by the selected protocol, the applicable creator-fee entitlement may be directed to the independent token launcher.

8.7 Buddy Fee Router & Revenue Vault

BUDDY AI intends to develop a fee-routing and accounting framework connecting:

- Token mint addresses
- Original creator beneficiaries
- Fee rates and allocation rules
- Claimable and distributed amounts
- Drama IDs and Character IDs
- Token-launcher beneficiaries
- Actual fee collections
- Verifiable payout records

The design aims to ensure that the creator beneficiary is established before launching an associated token and cannot be unilaterally redirected by the launcher.

The system must correctly attribute collected fees to each eligible token even where underlying protocol fee accounts aggregate revenue by creator or quote asset.

8.8 Graduation and External Trading

Bonding-curve creator fees and post-graduation CPMM creator fees use distinct protocol mechanisms.

The proposed 70:30 distribution requires supported collection and routing infrastructure for each applicable phase.

Post-graduation fee rates, fee recipients, and collection paths must be independently configured and validated.

Fees generated through unsupported external trading routes are not automatically included in BUDDY AI creator distributions.

Creator-fee revenue belongs to the designated creators and launchers and does not automatically become BUDDY AI platform revenue.

One Character. Many Memes. More Opportunities for Creators.

BUDDY AI / WHITEPAPER

Creator-fee distribution

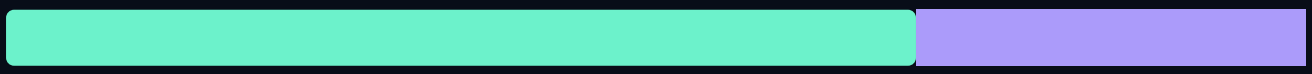

FLOW B / MEME CREATOR FEES

0.30%

Target creator-fee component

Qualifying bonding-curve volume. Subject to protocol configuration; separate from underlying protocol trading fees.

Eligible creator fees actually collected and available for distribution

Token launcher

ILLUSTRATIVE EXAMPLE

1,000 SOL volume x 0.30% = 3 SOL nominal creator fee

If all 3 SOL is distributable: 2.1 SOL to the creator + 0.9 SOL to the launcher.

FIGURE 04 / The 70:30 split applies to eligible distributable creator-fee receipts, not total volume, market capitalization or all trading fees.

BUDDY AI / CHAPTER 09

09

Paid Drama & AI Creator Services

Sustainable Revenue from Entertainment

The primary purpose of BUDDY AI is to enable the creation and consumption of original entertainment.

The platform intends to support both free and paid drama distribution.

9.1 Publishing Models

Creators may offer:

- Free episodes
- Paid season access
- Special creator experiences
- Paid individual episodes
- Premium content

Creators set their content prices under applicable platform rules.

9.2 Supported Payment Assets

BUDDY AI intends to support:

BUDDY · BTC · ETH · SOL

BUDDY and SOL payments may be implemented through Solana-compatible infrastructure.

Native BTC and ETH payments will require their respective network integrations or supported payment services.

Payment methods may be introduced in stages.

9.3 Paid Viewing Revenue Sharing

BUDDY AI proposes the following split for eligible distributable paid-viewing receipts:

- **95% - Drama Creator**
- **5% - BUDDY AI**

The distributable base is calculated after applicable refunds, taxes, third-party processing charges, and disclosed transaction deductions.

9.4 Content Access & Settlement

The platform intends to provide payment confirmation, viewing access, transaction histories, and creator revenue records.

9.5 Paid AI Services

Additional revenue opportunities may include paid AI-generation credits, advanced creation tools, premium workflows, and media-processing services.

These services have separate pricing and cost structures and are not automatically governed by the 95:5 paid-viewing model.

9.6 Independent Creator Opportunities

Creators can earn from paid content without issuing any Meme.

Likewise, community users can launch independent tokens without producing a drama.

Entertainment Comes First. Community Participation Expands the Possibilities.

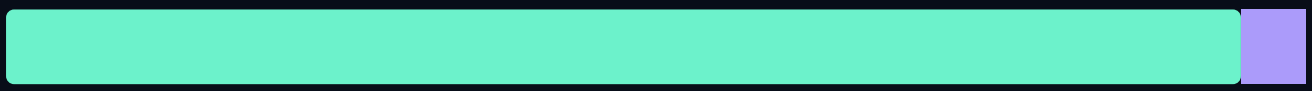

BUDDY AI / WHITEPAPER

Paid-viewing distribution

FLOW A / PAID VIEWING

Eligible distributable paid-viewing receipts

After applicable refunds, taxes, processing charges and disclosed transaction deductions.

95%

Drama creator

5%

BUDDY AI

Separate service economics

Paid AI-generation credits, advanced creation tools and media-processing services have their own pricing and costs. They are not automatically governed by the 95:5 viewing split.

FIGURE 05 / Viewing revenue and Meme creator fees use separate accounting bases.

BUDDY AI / CHAPTER 10 10

BUDDY Tokenomics & Platform Revenue

Real Platform Activity. Transparent Ecosystem Allocation.

BUDDY is the existing Solana ecosystem token.

BUDDY Mint Address:

`4P8ZC4cGTBPz4TPsFHtuoyLT8ftDcf8J9pzmJrUMoNb8`

BUDDY AI does not intend to issue a replacement BUDDY token.

10.1 BUDDY Utility

Content Payments

BUDDY may be used to purchase eligible paid-drama content.

AI Creation Services

BUDDY may be accepted for selected creation tools and AI-service credits.

Staking Participation

Eligible holders may participate in a proposed staking-reward system.

Buyback & Burn

A share of net distributable platform revenue is intended to fund BUDDY buybacks and permanent token burns.

10.2 Platform Revenue Sources

The initial platform revenue source is the **5% service share from eligible paid-drama viewing receipts**.

Other revenue may arise from paid AI creation services or disclosed future platform products.

BUDDY AI does not assume proprietary revenue from token creation fees, additional trading fees, or graduation fees in its initial model.

Creator-fee allocations belonging to original drama creators and token launchers are not BUDDY AI revenue.

Any other income actually received through protocol configuration or infrastructure rights must be separately recorded and disclosed.

10.3 Three Distinct Economic Flows

Flow A - Paid Drama Revenue

Eligible distributable viewing receipts:

- 95% to the drama creator
- 5% to BUDDY AI

Flow B - Meme Creator Fees

Eligible distributable creator-fee receipts:

- 70% to the original drama creator
- 30% to the token launcher

Flow C - Platform Net Revenue Allocation

Actual net distributable BUDDY AI platform revenue:

- 20% to staking rewards
- 40% to buyback and burn
- 30% to ecosystem treasury
- 10% to the Original BUDDY Creators Reserve

The three flows have separate calculation bases.

10.4 Net Distributable Platform Revenue

Net distributable platform revenue means eligible income actually realized by BUDDY AI after applicable refunds, taxes, third-party processing charges, operating costs, and other disclosed deductions not already accounted for.

This definition prevents distributing funds that belong to creators or have already been consumed by expenses.

10.5 Allocation Framework

20% - BUDDY Staking Rewards

Allocated to a proposed staking reward pool.

Reward amounts will depend on eligible participation and actual available platform income, without promising fixed annual yields.

40% - BUDDY Buyback & Burn

Allocated to the acquisition and permanent burning of BUDDY.

The platform intends to publish verifiable records of executed purchases and burns.

30% - Ecosystem Treasury

Allocated to platform development, infrastructure, security, creator tools, ecosystem programs, and long-term reserves.

10% - Original BUDDY Creators Reserve

Reserved for the original creative team behind the 2026 horror film *Buddy*.

This allocation expresses appreciation for the creators of the character that inspired the BUDDY community.

10.6 Illustrative Revenue Example

Assume viewers purchase a total of 100 SOL in eligible drama content.

After 10 SOL in illustrative applicable deductions, distributable viewing receipts are 90 SOL.

The creator receives 85.5 SOL, and BUDDY AI receives 4.5 SOL.

If 1.5 SOL in further eligible platform operating expenses is deducted from BUDDY AI's share, net distributable platform revenue equals 3 SOL.

The ecosystem allocation would then be:

Allocation	Amount
Staking Rewards - 20%	0.60 SOL
Buyback & Burn - 40%	1.20 SOL
Ecosystem Treasury - 30%	0.90 SOL
Original BUDDY Creators Reserve - 10%	0.30 SOL
Total	3.00 SOL

This example is for explaining the accounting model, not forecasting revenue.

10.7 Revenue Transparency

BUDDY AI intends to maintain records distinguishing allocated budgets, actual collections, completed transfers, token buybacks, verified burns, and the accumulated Original BUDDY Creators Reserve.

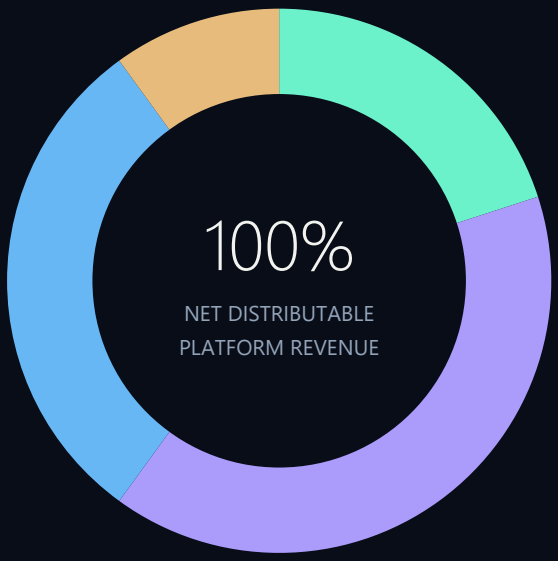

BUDDY AI / WHITEPAPER

Platform revenue allocation

FLOW C / PLATFORM NET REVENUE

Actual net distributable BUDDY AI platform revenue

After eligible platform expenses and deductions. Creator-owned receipts are excluded.

- 20%
  Staking rewards
  Participation and available income
- 40%
  Buyback & burn
  Acquisition and permanent burns
- 30%
  Ecosystem treasury
  Development, security and reserves
- 10%
  Original BUDDY Creators Reserve
  Original creative team of Buddy (2026)

THREE FLOWS. THREE CALCULATION BASES.

95:5 viewing receipts / 70:30 creator-fee receipts / 20:40:30:10 platform net revenue. These percentages are not added together.

FIGURE 06 / Allocation framework. The film-team reserve is a share of platform net revenue, not a token-supply allocation.

BUDDY AI / CHAPTER 11

11

Technology, Security & Transparency

Built on Solana

BUDDY AI proposes a modular architecture connecting AI production, entertainment distribution, community token creation, and transparent revenue accounting.

11.1 Application Layer

The user interface will support:

- Drama discovery and viewing
- Character profiles
- Token detail pages
- Wallet interactions
- Revenue information
- Creator accounts and dashboards
- Associated token lists
- Unified Launchpad
- Paid-content access

11.2 AI Production Layer

Third-party AI models and processing services may support script creation, images, video, sound, subtitles, editing, and multilingual workflows.

11.3 Content & Payment Layer

Video hosting, content delivery, payment verification, access control, and creator settlements will support the entertainment experience.

11.4 Story & Character Registry

The registry connects authenticated creators, Drama IDs, Character IDs, association permissions, and token mint addresses.

A formal character association cannot be created without a valid character record established by the drama creator.

11.5 Unified Launch Layer

The Launchpad will use common token-creation, validation, configuration, and transaction infrastructure across its three entry points.

11.6 Market Data Layer

Token listings may display prices, volumes, market capitalization, liquidity, holder counts, and graduation status using supported on-chain and market-data sources.

Mint addresses uniquely identify tokens. Market data may be delayed or estimated and will be presented accordingly.

11.7 Fee Accounting & Distribution

Creator-fee accounting will distinguish bonding-curve collections, post-graduation CPMM collections, and other applicable fee rights.

Revenue beneficiaries and allocation records must be traceable.

Any automated fee-routing contracts require technical validation and security review before live use.

11.8 Identity & Association Integrity

BUDDY AI aims to provide procedures for incorrect associations, creator-account disputes, unauthorized content use, and misleading token representations.

Character registration is distinct from independently verified ownership or endorsement.

Formal association indicates a recorded platform relationship and does not guarantee a token's price, liquidity, or safety.

11.9 Security & Product Transparency

Critical payment, token-launch, and revenue-handling infrastructure will require testing and appropriate review.

The platform will distinguish operational features from features under development.

BUDDY AI / WHITEPAPER

From launch to liquidity

LAUNCHLAB TO CPMM / TECHNICAL CONDITIONS

CONFIGURE BEFORE LAUNCH

Read the selected LaunchLab and CPMM configuration and identify the actual fee beneficiary.

ACCOUNT FOR EACH PHASE

Track bonding-curve creator-fee collections separately from CPMM creator-fee collections.

VALIDATE THE ROUTER

The 70:30 distribution needs supported collection, token-level attribution and payout routing in each phase.

KEEP FEE RIGHTS DISTINCT

Locked-LP Fee Key rights are separate from CPMM creator-fee rights. External routes are not automatically covered.

FIGURE 07 / LaunchLab and CPMM use distinct fee mechanisms. BUDDY-specific fee routing requires supported collection, attribution and distribution validation.

Protocol references: Raydium LaunchLab creator fees; PlatformConfig; CPMM fees. Official documentation links appear in the closing reference note.

Roadmap 2026-2031

THE DEVELOPMENT HORIZON

2026

Foundation

Documentation, prototypes and technical design

2027

Drama, Characters & Launchpad

Core publishing, registry and unified token launching

2028

Paid Entertainment & Creator Economy

Payments, settlement and ecosystem accounting

2029

Character Universes

Collaboration, discovery and original entertainment

2030-2031

Global Ecosystem

Multilingual creation and global distribution

FIGURE 08 / Development objectives for 2026-2031. Milestones may evolve with technical progress and available resources.

Milestones & delivery targets

2026 - Foundation

Establishing the BUDDY AI Vision

- Whitepaper and brand development
- Core product architecture
- Solana and Raydium technical research
- Website and interface prototypes
- Story & Character Registry design
- Initial AI short-drama content development

Target: Public project documentation, product prototypes, and initial technical designs.

2027 - Drama, Characters & Launchpad

Delivering the Core Experience

- Short-drama publishing and viewing
- Drama and Character IDs
- Drama and character pages
- Unified Launchpad with three entry points
- Creator-initiated token launching
- Raydium LaunchLab integration
- Creator accounts and dashboards
- Creator-controlled character registration
- Associated Meme discovery
- One-click character Meme launching
- Standard permissionless launching
- Supported creator-fee accounting and distribution

Target: A working content-to-character-to-token experience with verifiable launch and revenue records.

Associated launches offering creator-fee sharing will depend on successful fee-routing validation.

2028 - Paid Entertainment & Creator Economy

Expanding Monetization

- Paid-drama purchases
- BUDDY and SOL content payments
- Expanded AI production services
- Buyback, burn, and treasury reporting
- Creator settlement and earnings dashboards
- Additional BTC and ETH payment integrations
- BUDDY staking infrastructure

Target: Verifiable paid-content revenue, creator settlements, and ecosystem accounting.

Character Universes & Global Creation

2029 - Character Universes

Expanding Original Entertainment

- More advanced creator collaboration
- Expanded original character universes
- Community analytics
- Multi-contributor revenue settings
- Improved token and character discovery
- Content partnerships and attribution tools

Target: A broader ecosystem of creators, stories, characters, and independent communities.

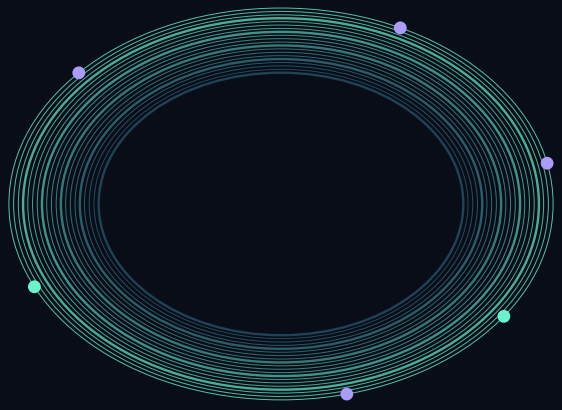

2030-2031 - Global Ecosystem

Supporting Creators Worldwide

- Multilingual creative workflows
- Advanced AI storytelling tools
- Platform integrations
- International creator onboarding
- Broader content distribution
- Scalable creator monetization

Target: A global entertainment ecosystem connecting independent creators, audiences, and communities.

Roadmap milestones represent development objectives and may evolve with technical progress and available resources.

EVERY STORY DESERVES A UNIVERSE.

BUDDY AI / CHAPTER 13 13

Our Vision

Stories Create Characters.

Characters Inspire Memes.

Communities Support Creators.

A story is more than a video.

It is a world imagined and created by someone.

A character is more than a name.

It has a story, an identity, and the potential to inspire many communities.

A Meme is more than a ticker.

It can be an independent expression of a community's enthusiasm for a character or cultural moment.

BUDDY AI aims to connect these experiences.

We envision a platform where independent creators can develop stories, introduce unforgettable characters, and reach global audiences.

Where viewers naturally move from watching entertainment to discovering characters.

Where communities can freely launch independent Memes around those characters through a simple, unified experience.

And where eligible community activity can create more opportunities for original creators.

We are not building an ecosystem where every character is limited to a single token.

We are building a platform where one story can create many characters, and every character can inspire many Memes.

Creators Establish Characters. Communities Launch Memes. BUDDY AI Connects Them.

BUDDY AI

Every Story Deserves a Universe.

Create Stories. Discover Characters. Launch Memes. Reward Creators.

BUDDY AI / WHITEPAPER

Important Notice

This whitepaper describes BUDDY AI's vision and proposed product, technical, and economic framework.

Certain features, creator-fee systems, payment integrations, staking arrangements, and ecosystem allocations remain subject to development and technical verification.

Digital assets involve significant risks. This document does not guarantee token appreciation, investment returns, fixed staking yields, or the completion of all proposed features.

Protocol reference note

The technical illustration on LaunchLab and CPMM uses the following Raydium-maintained documentation. Protocol configuration and deployed interfaces should be checked again before implementation.

LaunchLab creator fees

LaunchLab PlatformConfig

CPMM fees

Documentation consulted 7 November 2026.
